

BOXES Cable Entries

To complete and guarantee the high performance and reliability of the Optotec products, a range of accessories and kits are selected. These articles can become the weak link in the chain whereas it should preserve the integrity of the installation. Our choice is a selection of quality components.

Manufactured from tough nylon materials, the cable glands range offers many advantages over conventional stuffing glands.

The cable glands guarantee a high IP rating (IP68) to be used in a variety of dry or wet industrial environments.
