

CODC Closure

The FOCUS ODC Compact closure has mainly been developed for FTTH access networks. Thanks to its slim design the closure can be used both for underground and for aerial applications.

Suitable for splicing of standard optical cables or for blowing of micro-cables, the compact closure is the ideal solution for

an access network. The flat rectangular shape guarantees installation in restricted environment such as small hand-hole or cabinet.

The space behind the frame can be used either as storage for uncut loose buffer tubes or as a patching point.
