

ODC Sealing Kits

Cold Applied Types

Each seal is re-accessible and allow easy and fast installation of any cable even when other cables are pre-installed in the same port.

Whatever the construction of the cable is, all sealing kits allow to terminate either the aramid yarns or the strength member in order to provide a good resistance to accidental forces.

Depending from the size of the cable, each sealing kit permits the entrance of one or more cables in the same port even in different sequences. The sealing (IEC529 and IP68) in all circumstances is always guaranteed.

Optotec's FOCUS Closures Cold Applied Sealing kits are patented since Dec 23th 2009 (cfr. EP2136118A1 'Device for sealing cables through containers for optical fibres and container comprising said device')
